

Colour coding is the idea of designating particular cleaning products and processes to consistent colour schemes. Its purpose is to segregate equipment and procedures in order to prevent cross contamination in the home and workplace.

Follow the 'Golden Rules' below to use colour coding successfully and help protect human health.

1. Make Colour Coding part of your employee induction training and continuous training programme.
2. Monitor the colour coding system on an ongoing basis to make sure it remains effective.
3. Always start in the cleanest, least contaminated area leaving washrooms until last.
4. Colour coded products include Mops, Buckets, Cloths, Brushes, Squeegees, Dustpans, Gloves, Aprons, Bins, Bin Bags, Micro Fibre Dusters, Cleaners Trolleys etc.
5. Ask your System Hygiene representative for help and advice.
